83 Copper Cabling Solution

Patch Panel
Keystone Jack
Network Face Plate
Structure Cabling Patch Cord
Network Cable

91 Fiber Optic Passive Solution

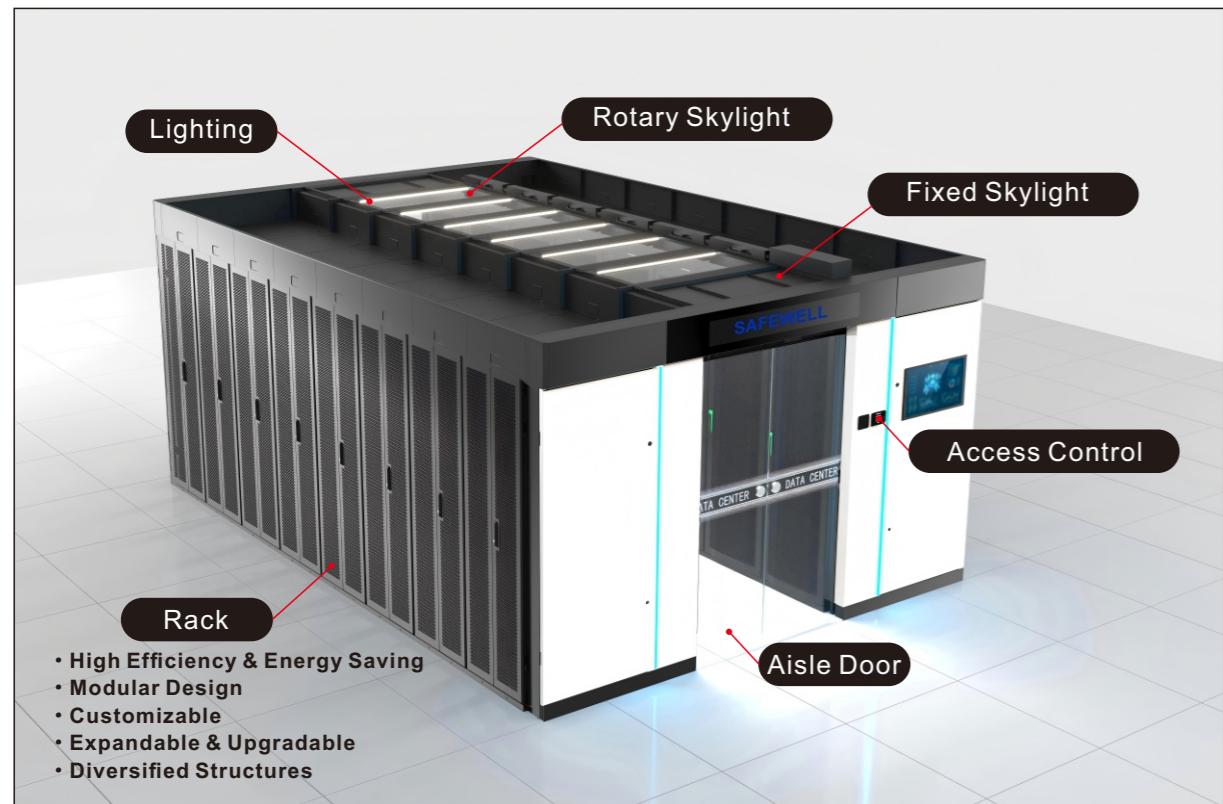

Fiber Optic Patch Panel
Optical Patch Cord

DATA CENTER SOLUTION

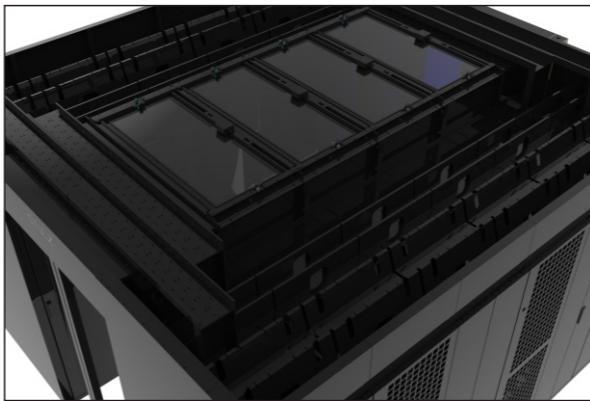

Aisle Containment System

Cold/Hot Aisle Containment System is a critical airflow management solution in data centers designed to optimize cooling efficiency. Server racks are arranged in an alternating "face-to-face, back-to-back" configuration, combined with aisle doors, skylights, and sealing panels to form a cold and hot aisle layout. This design physically separates the supply of cold air from the hot exhaust generated by IT equipment, thereby improving cooling efficiency and reducing energy consumption.

Cable Management For Data Center

Overhead Cable Troughs

Fixed to the top of the cabinet, it is used to guide the transmission of power cables and data cables at the top of the cabinets.

- Modular design supports flexible module combinations.
- Power cables and data cables are managed separately to prevent interference.
- Tool-less snap-lock installation, reduces deployment workload.

Wire Mesh Cable Tray And Fiber Duct

In data centers, various common wire mesh cable tray components and fiber duct components are all available.

Aisle Containment System Components

Aisle Door

- Full-automatic, semi-automatic, and manual sliding doors, as well as semi-automatic and manual swing doors available.
- Embedded Sliding Door Frame: Highly integrates dynamic environment displays, access control systems, lighting switches, environmental monitoring hosts, RGB ambient lighting, and door header displays, delivering both elegant aesthetics and comprehensive functionality.
- Automatically unlocks or forcibly opens upon fire alarm activation.
- Various access controllers which are card reader, keypad, or fingerprint.

Skylight

- Rotary, fix and one-click reset roof ceiling available.
- Forcibly opens upon fire alarm activation.
- Optional LED lighting module integration.

Other Aisle Containment System

Hot Aisle Containment

Rack-Independent Aisle Containment

Mini Data Center

Our company transformed the computer room technology to an integrated Mini Data Center solutions with in house UPS power supply, Precision Air-conditioning, access control system, lightning protection, remote monitoring, fire protection, emergency ventilation, etc. The system is integrated to provide IT equipment with safe and reliable operation support. Now data center one-stop deployment and operation management is lot easier with integrated Mini Data Center.

Application

Financial Business Outlets, Government, Education, Medical Care, Transportation, Small and Medium-Sized Enterprise, Commercial Super Retail, Etc. No Special Machine Room Required.

Features

High efficiency

Energy saving and efficient power supply is achieved through cold and hot airtight isolation. Power Usage Effectiveness (PUE) will be less than 1.2.

Quick deployment

Out of the box pre-installed components. No need to set up the room, AC, Monitoring, Fire protection etc. Just need a power line to plug in play the MDC and its ready for use. MDC with external AC outdoor unit just need to connect with a power line and connect with MDC internal system.

Simplify operations

15 inch in built LCD display with windows operating system for simple operation of MDC environment and management. The interface is simple and can achieve custom seamless expansion.

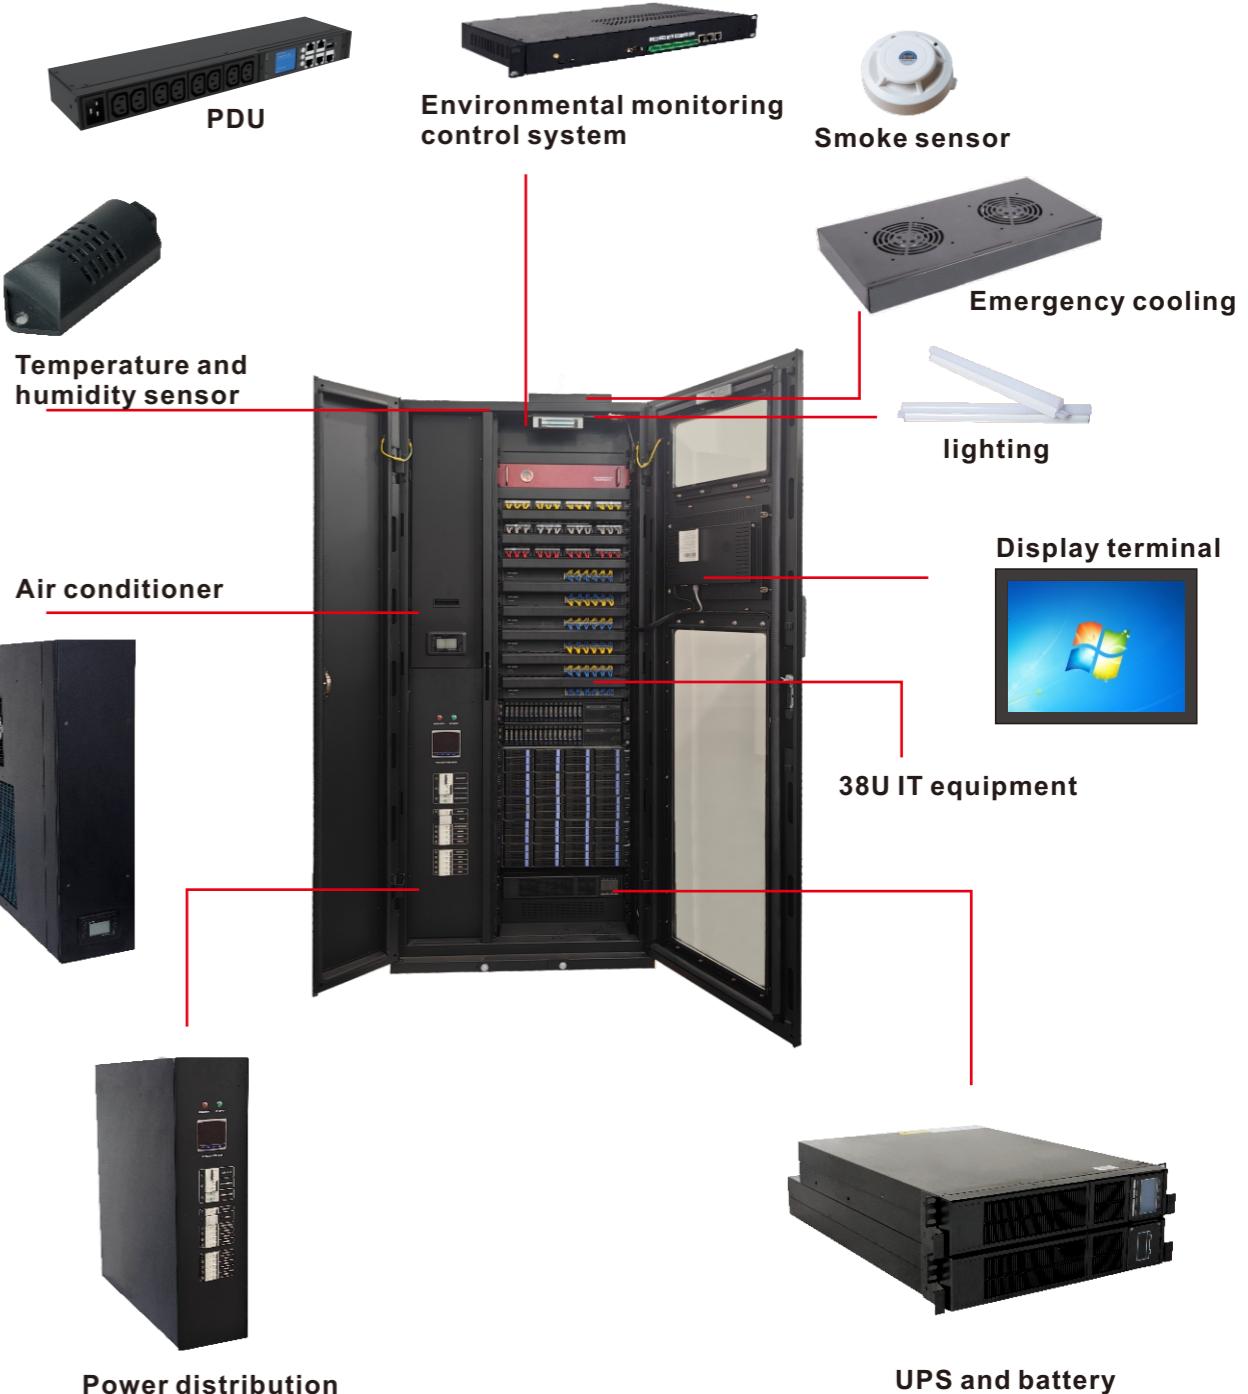

Low environmental requirements

No need to install raised floor or require special room to build data center. It can even simply put in your office room, meeting room or any other non-hazardous environments.

Flexible capacity expansion

Seamless and fast expansion is possible and can be implemented in short time.

Component

Techincal Specifications

MDC-1T1R3K14		
Rack	Width*Depth*Height	870*1200*2000mm
	U space	42U
	Load capacity	1500 kgs
	Emergency intake fan	Temperature-controlled fan
	Emergency exhaust fan	Temperature-controlled fan
Air conditioner	Air conditioner type	Air cooled package type cooling unit
	Mount type	Tower type
	Cooling capacity	3KW
	Variable frequency	√
Power	Power distribution module	110-240Vac/1Ph, 50/60Hz
	UPS	3KVA,2U rack-mounted
	Battery	5-10mins
	PDU	2pcs*Horizontal PDU
Fire protection	Rack-mounted Gas Fire Extinguishing System	Temperature sensing, ≥68°C(Optional)
Environmental monitoring system	Monitoring system	Linux, with 15" Touch Screen
	Monitoring object	UPS, battery packs, air conditioners, power distribution, temperature and humidity sensors, water leakage detectors, smoke detectors, access control, video...
Available space	IT load	2.4KW
	Available space for devices	≤32U

Multi-Cabinet Combination

Model	MDC-1T2R6K
IT Capacity	4.8KW
UPS	6KVA
AC QTY.	2PCS
Cooling Capacity	3+3KW
User Available Space	29U+42U
Dimension(mm)	1470*1200*2200

Model	MDC-1T3R10K
IT Capacity	7KW
UPS	10KVA
AC QTY.	1PC
Cooling Capacity	7.5KW
User Available Space	21U+42U+42U
Dimension(mm)	2070*1200*2200

Outdoor Integrated Power Cabinet

Outdoor Integrated Power Cabinet is a comprehensive solution designed for outdoor scenarios such as 5G base stations and networking, providing power distribution and storage in a compact, all-in-one unit. Equipped with dustproof and waterproof features, temperature control, and intelligent management systems, it includes power management (AC/DC distribution, rectifiers, inverters, etc.), battery, Smart monitoring & control, and thermal management (air conditioning, heat exchangers, fans). Ideal for remote areas, outdoor operations, communication base stations, and emergency environments, it delivers reliable power support for industries including telecommunications, energy, transportation, government, military, healthcare, and scientific research.

Features

- High protection rating IP55, suitable for harsh outdoor environments.
- Wide input voltage range 80~300Vac, ultra-wide operating temperature range -40~+65°C, comprehensive lightning protection on AC and DC sides.
- High-efficiency module efficiency >96%, supporting hot-swappable and modular expansion.
- Complete power system management functions, including data acquisition & processing, battery management, and system solution monitoring & control.
- Various thermal management systems (air conditioning, fans, heat exchangers) to match cooling requirements for different regions and devices.

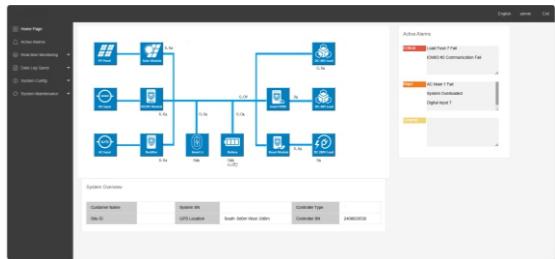

Power Supply

- 48V DC Modular AC & DC Power Distribution

Monitoring Systems

- Management Environmental Monitoring
- Alarm Management
- Power & Battery Monitoring Sensors: door opening, smoke detector, humidity sensor, temperature sensor etc.

Battery

- Lithium iron phosphate battery
- Equipped with BMS system

Thermal management

- IP55 Outdoor Air conditioner
- Fan & Filter Systems/heat exchange is optional.

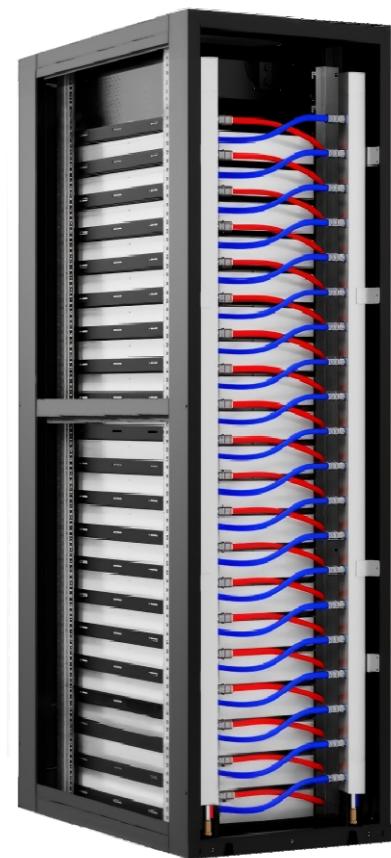

Parameters

System Input	
Input Voltage	220 / 380VAC three phase four wire,compatible with 220VAC single-phase (single-phase rectifier module:85VAC~ 300VAC)
Input Frequency	50Hz/60Hz (45Hz ~ 65Hz)
Lightning protection	L-N,N-E,8/20μs,In=20Ka (Class B SPD optional)
Input Setting	Configure (mains + generator) two-way AC input,manual switching, and mixed insertion of forward line solar modules.
System Output	
Output Voltage	220Vac (90VAC~275VAC) 43.2Vdc~58Vdc; Output setpoint 54Vdc or 57VDC
Output Frequency	Solar module:3000W Boost module: 3000W Rectifier module / DC power access module:4000W(75A) / 3000W(50A)
Efficiency	Rectifier module:≥95%;Solar module:≥97%;Boost module:≥93%;DC power access module peak efficiency:≥96%
Environmental Requirements	
Operating	10°C~50°C (rated output);
Temperature Range	40°C~70°C (Operating and storage temperature)
Altitude	≤3000m,>3000m derating use
Working relative humidity	Working relative humidity ≤ 90%; Storage and transportation relative humidity ≤ 95%
Mechanical Parameters	
Dimension(mm)	600W*600D*2000H、800W*800D*2000H
Protection Rating	IP55
Main components of the system	Intelligent power supply unit (rectifier module,solar module,DC power access module,boost module,monitoring module,power distribution module),intelligent lithium battery unit,DC air conditioning unit (indoor cabinet is not included)
Monitoring function	Multi input module collaborative management,multi output power distribution management,intelligent lithium battery management

Liquid-Cooled Product

Liquid Cooling Server Cabinet

Liquid Cooling Server Rack is specifically designed for high-density computing scenarios (such as AI intelligent computing, supercomputing centers, and high-performance computing). It features an ultra-high-strength frame structure with a static load capacity of up to 2,500 kg and supports standard 52U rack specifications. The rear sides are equipped with manifolds (distribution units) to connect to the liquid cooling system, along with high-power PDU (Power Distribution Unit) configurations, providing a stable operating environment for cold-plate liquid-cooled servers.

CoolLoop RDHx

CoolLoop RDHx is a rear-door heat exchanger specifically designed for high-density IT applications, providing an efficient and room-temperature-compliant cooling solution. With a compact footprint, it delivers up to 85 KW of cooling capacity. By utilizing a liquid-to-liquid heat exchanger, it effectively manages high heat loads, enhancing free cooling efficiency and reducing energy consumption. Equipped with high-performance fans, it ensures rapid heat dissipation for optimal thermal management.

**NETWORK / SERVER
RACK CABINET**

Standing Server Rack SS01 Series

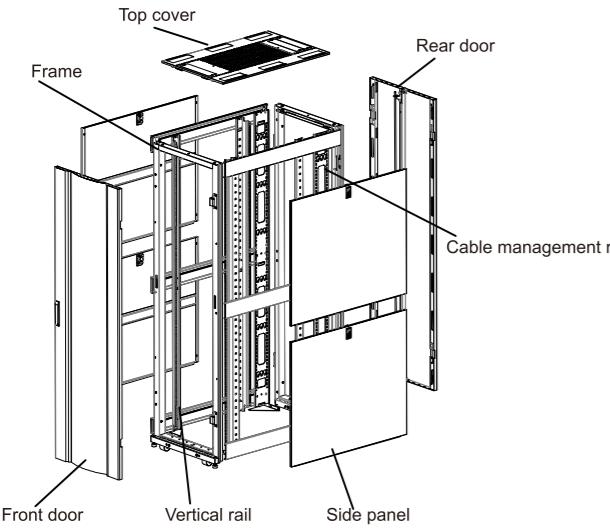

The SS01 Series server rack is an exceptional rack solution engineered for complex data center environments.

- It accommodates servers from various brands, delivering optimal compatibility. The 19" mounting rails feature adjustable depth settings, enabling effortless customization of equipment installation depth.
- Tool-free removable segmented side panels facilitate post-installation maintenance operations.
- Both front and rear mesh doors achieve up to 78% ventilation efficiency, ensuring unimpeded airflow within the cabinet. Multiple cable access points and integrated management features enable flawless cable organization.
- Modular frame structure designed for flat-pack packaging, reducing shipping and warehouse space volume by 60%.

High-Capacity Server Rack SS12 Series

Featuring a fully welded frame structure and high-ventilation mesh doors, SS12 Series Rack deliver ultra-high load-bearing capacity and superior heat dissipation, making them ideal for high-density deployment environments such as supercomputing data centers and AI data centers.

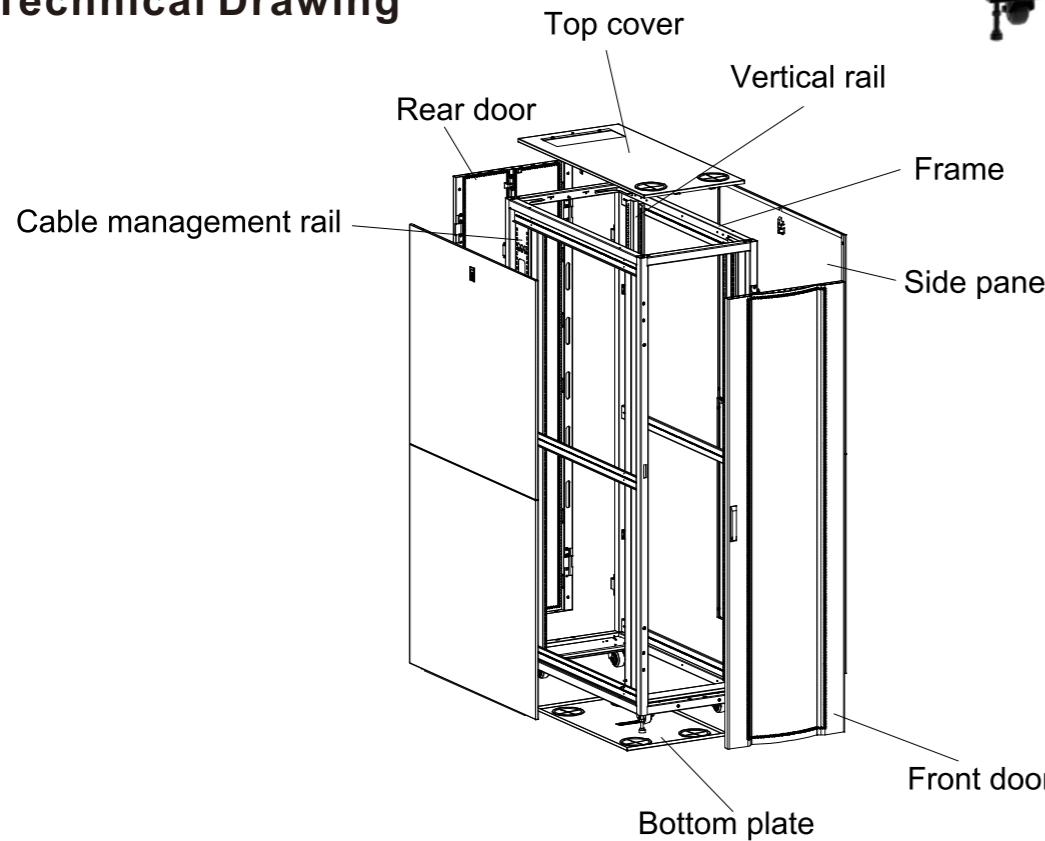

- High-strength welded frame with a static load capacity of 2000 kg and a dynamic load capacity of 1200 kg.
- It accommodates servers from various brands, delivering optimal compatibility. The 19" mounting rails feature adjustable depth settings, enabling effortless customization of equipment installation depth.
- Tool-free removable segmented side panels facilitate post-installation maintenance operations.
- Both front and rear mesh doors achieve up to 85% ventilation efficiency, ensuring unimpeded airflow within the cabinet. Multiple cable access points and integrated management features enable flawless cable organization.

Standing Network Rack SN01 series

SN01 Series Cabinet is an economical and efficient network rack system, specifically designed for medium to high density cabling and equipment storage in IT environments and data centers.

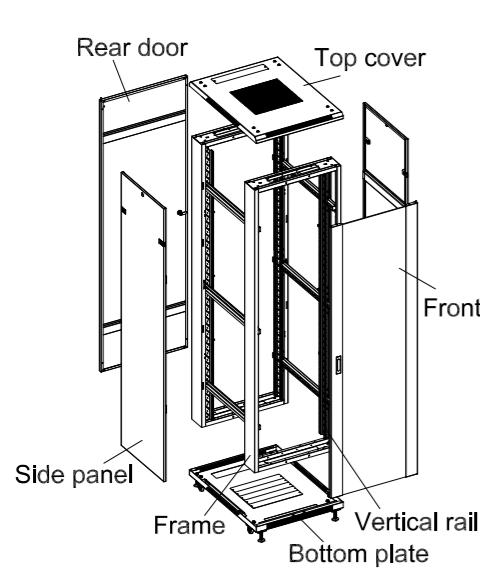

- Safewell offer a variety of cable management accessories for flexible configuration. Combined with its extensive cable management devices, it provides you with the optimal cabling solution.
- The adjustable 19" mounting rails and removable side panels offer greater compatibility and convenience for user equipment installation.
- The front door features a highly transparent tempered glass design, allowing users to visually inspect internal equipment. Safewell also offer many door style options for customers to choose from.
- Its modular assembly design allows for optional flat-pack packaging, saving up to 60% in transportation volume and warehouse space.

COLO Server Rack SS02 Series

The SS02 Series Cabinet is a high-performance server rack specifically designed for medium-to-high density data center leasing and colocation. A single cabinet is effectively divided into multiple independent compartments, enabling tenants to share one cabinet, maximizing space utilization in data centers, server rooms, or network environments.

- Each compartment has independent front doors, rear doors, and removable side panels to better protect tenant assets' security and privacy.
- Perforated front/rear doors with 78% ventilation rate ensure smooth airflow inside the cabinet, equipped with dedicated combination locks for effective theft prevention.

COLO Network Rack SN02 Series

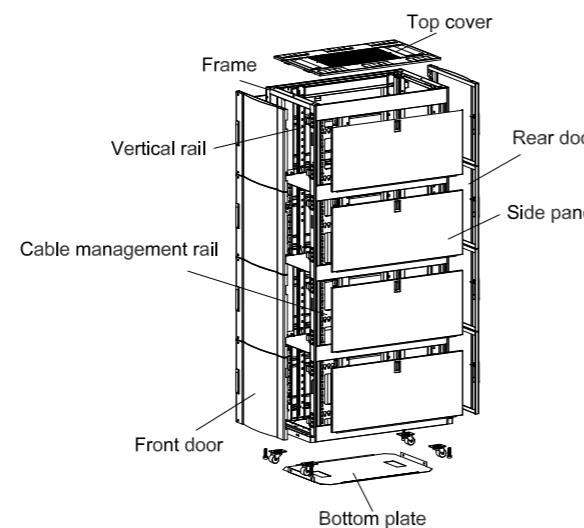

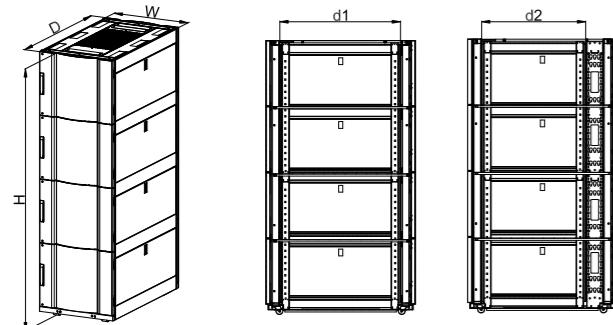

The SN02 Series Cabinet is an economy rack specifically designed for data center colocation and hosting services. Individual cabinets are effectively segregated into multiple independent compartments, enabling tenants to share a single cabinet, thereby maximizing space utilization in data center, server room, or network environments.

- Each compartment has independent front doors and rear doors to better protect tenant assets' security and privacy. Independent 19" adjustable-depth mounting rails to accommodate the installation of equipment with various depths.
- Perforated front/rear doors ensure smooth airflow inside the cabinet, equipped with dedicated combination locks for effective theft prevention.

Soundproof Cabinet SN03 Series

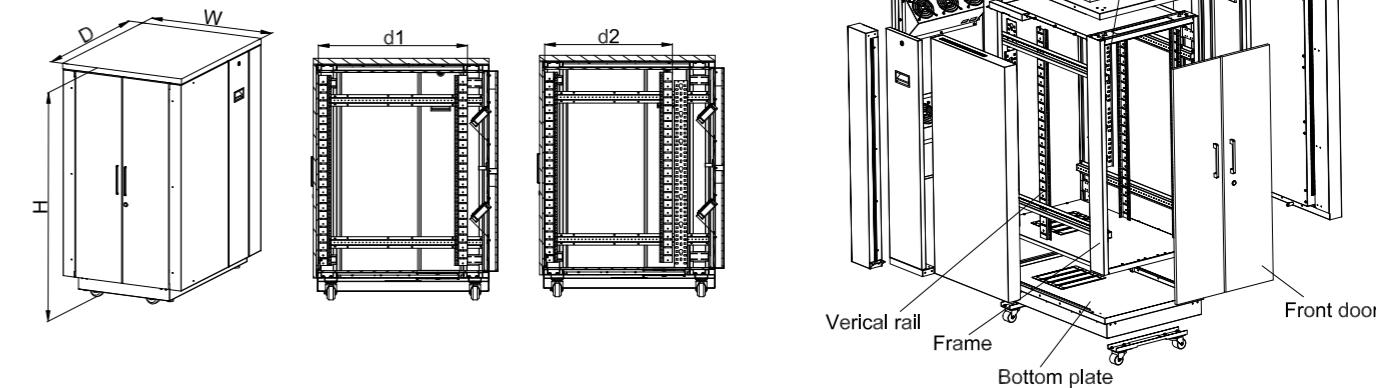

When space and budget constraints prevent the construction of traditional equipment rooms, the SN03 series soundproof cabinet emerges as your optimal solution. Its noise-reduction technology and stylish furniture-inspired design allow seamless integration even in customer-facing environments. Perfect for banks, retail stores, medical facilities, classrooms, and office.

- 18-20 dB broadband noise reduction, measured 1.0 m in front of the enclosure.
- All-in-one design: equipped with fans, integrated cable managers, just add IT Equipment.

Open Frame Rack

Open Frame Racks offer a quality and cost-effective solution for installing rack-mountable equipment where security at the individual rack level is not required. Add high-density vertical cable managers for maximum cable volume.

SR01 Series

- 19" single frame rack
- Equipped with 4 casters for easy mobility.
- Large holes on the frame sides enable quick cable management; an optional dedicated cable management tray is also available for cable organization.

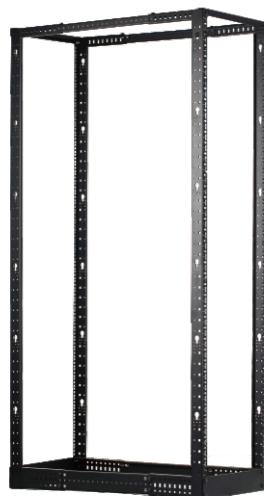

SR02 Series

- The 19" double frame rack features enhanced structural stability, with equipment mountable on both front and rear frames.
- Equipped with 4 casters for easy mobility.
- Large holes on the frame sides enable quick cable management; an optional dedicated cable management tray is also available for cable organization.

SR03 Series/SR03005 Series

- 19" 2-post steel construction rack.
- Prior to equipment installation, the rack must be secured to the floor.
- Multiple tool-less mounting points for cable management and PDU.
- Material: cold rolled sheet or aluminum.

SR04 Series

- 19" 4-post steel construction rack.
- Depth adjustable from 22" to 40", paired with adjustable-depth shelves that support placement of oversized devices.
- Multiple tool-less mounting points for cable managers and PDU.
- Easily integrates modular combinations to form multi-rack configurations.

Slide-Out Rack/Desktop Open Frame Rack

Slide-Out Rack SR08 Series

The slide-out rack designed for 19" standard equipment, constructed from durable 3.0mm thick SPCC. It supports wall-mounted or recessed installation and features the innovative heavy duty extendable rail system, allowing easy access to the rear of equipment for maintenance and cable management. Ideal for data centers, broadcast, security, and industrial applications.

- Supports up to 24U equipment, meeting high-density deployment needs.
- Square perforations compatible with snap-in cage nuts for flexible and tool-free installation.
- Smooth extension and rotation with 45° and 90° locking angles for easy servicing.
- Dual-position locking (extended/retracted) ensures stability and security.

Desktop Open Frame Rack SR05 Series

The desktop open frame rack is ideal for use on a workbench or in the back room of small office spaces without dedicated wiring closets. Store your lightweight, rack-mountable equipment - patch panel/data/AV/communication/studio equipment.

Open Frame AV Rack SR09 Series

The open-frame AV rack is a mounting solution designed specifically for audiovisual (AV) equipment, featuring an open structure that delivers optimized airflow and versatile hardware configuration capabilities. It is suitable for residential, commercial, and data center environments.

- Wall-mounted and floor-standing installation options are available.
- Modular structure allows for quick and convenient assembly.
- Dual-type mounting rails can meet M6 square holes and 10-32 or 12-24 Threaded Holes

Other Wall Mounted Cabinet

Notebook Wall Mounted Cabinet SM16 Series

The notebook wall mounted cabinet is ideal for organizing notebooks and IT equipment in educational, medical, or exhibition settings. The fixed compartment features dedicated shelves for peripherals like computer mice, pens, and other accessories.

Vertical Wall Mounted Cabinet SM22 Series

This cabinet is the ideal solution for those looking for a small cabinet with extended protection features, which is additionally characterized by vertical installation of devices and easy removal of a large number of wires. It is suitable as a protective rack for equipment in alarm security systems, CCTV monitoring, or various computer network components.

Flush Wall Mounted ONU Cabinet SM22005 Series

The flush wall mounted ONU Cabinet organizes hardware like routers, switches, and servers, maximizing space in tight areas. The cabinet offers durability and protection while keeping equipment easily accessible. Its compact size makes it ideal for small rooms or corridors where floor space is scarce. The cabinet ensures a streamlined layout for networking devices.
